

## CAHED HCC RENEWAL SEMINAR FOR JUNE 18-19 2009

### **The Project**

This session will begin with a discussion of current issues in healthcare construction, drawing on the experience of the participants. A sample project will be introduced that will be used throughout the program as an example

### **An Optimum Healthcare Environment**

One of the primary systems that provides the environment needed for treating patients is the HVAC system. His session will look at different types of HVAC systems used in healthcare and will focus on maintaining the optimum Healthcare Environment.

### **We have done an ICRA, Now what?**

ICRA is only the beginning of the process for environmental infection control. This session will examine different methods for controlling the spread of infection during construction and renovation.

### **We Have Mold -Managing Projects That Include Remediation**

Mold is everywhere, almost literally. This session will include a discussion about fungi as well as other airborne contaminants and some methods that can be used to minimize risk during construction, renovation and maintenance activities.

### **Life Safety Issues Encountered During Construction**

Construction almost always has an impact on life safety building features as well as operational life safety activities. This session will examine common life safety issues encountered during construction and renovation projects.
